

MINEPUMP

Overview

MinePump is the official token powering the MinePump Minecraft Mod, a revolutionary bridge between the creative world of Minecraft and the fast-paced culture of PumpFun token creation. Our mission is to make token generation fun, accessible, and gamified — directly inside Minecraft.

With MinePump, users can mint real tokens through an intuitive interface within Minecraft, turning in-game creativity into on-chain reality.

Utility

- Token Creation in Minecraft: MinePump enables players to create real PumpFun tokens through a graphical mod inside Minecraft.
- Access Requirement: Users must hold at least 200,000 MinePump tokens to access and use the mod.

Tokenomics

Token: MinePump

Total Supply: Fixed at launch (TBD)

Distribution:

- Airdrop: Distributed to early adopters and users interacting with the mod/platform.
- Dev Allocation: A portion reserved for developers and ongoing ecosystem growth.
- Liquidity & Listings: Set aside to ensure smooth trading and integrations.

Deflationary Mechanism

To ensure long-term value and ecosystem health, MinePump implements a dynamic burn mechanism:

- Burn 10% of dev-held tokens for every \$100,000 increase in market cap
- Encourages responsible dev allocations and ties token scarcity to growth

Mod Usage Fee

Every time a token is deployed through the Minecraft Mod:

- 0.01% fee is charged
- Fee supports further development, server costs, and game integrations

Conclusion

MinePump is more than just a token — it's a platform, a tool, and a bridge between digital worlds. Whether you're a seasoned degen or a curious crafter, this is your chance to mine, create, and pump like never before.
